

JÖST[®] AGAIN SUCCESSFUL IN THE CAOUTCHOUC MARKET

Everyone likes to return to proven quality. In spring 2005 and in autumn 2006 JÖST[®] delivered and made the start-up of two fluidised bed installations for the drying of synthetic caoutchouc to one of the largest producers of synthetic caoutchouc (SBR) in Europe . Quality and capacity of the installations obviously convinced the customer. At the beginning of May 2007 a further installation was ordered.

This time the order included not only a fluidised bed dryer and cooler but several dewatering screens, resonance conveyors as well as weighing stations. The earlier installed equipment on the site will be integrated by the JÖST[®] control system. The new unit will replace substantial parts of the existing production line and will be adapted into the local surrounding and interfaces.

With its products JÖST[®] supports the consistent orientation of the customer on fastidious solutions towards process engineering, which will lead to lasting economical successes for the customer.
