

Bridge Feeder

This machine represents a special application of our sorting conveyor type FSM.

FSM conveyors, which are especially suitable for the cast iron transport, are basically consisting of the vibrating trough, the trough carrying frame and the modular executed and standardized vibration absorber stations. The flexibility of the design allows a large distance between the absorber stations can be considered, enabling a floor conveyor to pass under the conveyor in this position.

OPTIONS

- Noise protection sandwich
- Rest sand screening section
- Side departures

TECHNICAL DATA

- Dimensions and execution are custom-made solutions

ADVANTAGES

- ✓ Execution particularly suitable for casting conveyors and casting coolers
- ✓ Conveyor permits passage way
- ✓ Great distance possible between the vibration absorber stations
- ✓ Serviceability
- ✓ Solves in many cases logistic problems

APPLICATIONS

- Green Sand Molding Process
